The AS-4000 Transcription Kit is the ideal companion to the DS-4000, although it can be used with all other Olympus digital voice recorders in the Pro-line range.

The AS-4000 Transcription Kit perfectly rounds up the Olympus digital system. Besides a footswitch and headset, it contains a software module developed to ensure maximum efficiency when converting the spoken words to text. Highlights include: easy file and document management, auto-receipt and redirection of emails into corresponding in-trays via FTP, POP3, SMTP or network, and an encryption function.

The DSS Player Pro software consists of two modules – the dictation module which is used when the voice recorder is connected directly to the PC, and the transcription module which is used by the secretary transcribing. The transcription module can also scan incoming emails\* for DSS files and places them in the appropriate folder.

Familiar icons for all the main functions (playback, stop, pause etc.) and working with the headset and footswitch assist the secretary to work efficiently. Once a file has been marked as “finished”, it is automatically archived but an additional option also allows the document to be returned to the sender.

Straightforward, reliable and efficient – processing files has never been easier.

**Main Features:**

- Includes a PC footswitch with USB or serial connection
- Stereo headphones
- DSS Player Pro software (Transcription module)
- Compatible with all Olympus Pro-line digital voice recorders

\* Applies to all MAPI-capable email programs
