

DP series DP-311

Simple, easy recording and play back. The DP-311 is the perfect user-friendly choice for everybody.

Product features

New MODE dial allows any user to operate easily

The DP-311 recorder makes it very simple for absolutely anyone to get to grips with high-quality recording. This is thanks to large, easy-to-follow buttons and a choice of three recording modes for different recording situations – Conversation, Loud Sound and Dictation – that can be selected simply by rotating the Mode Dial. The recorder then automatically sets the optimal recording settings in an instant.

Built-in memory (2GB) and SD card slot

In addition to the 2GB of built-in memory for up to 166 hours of recording, the DP-311 recorder also features an SD card slot. This means that SD memory cards can also be used to conveniently store and transfer your recordings of conversations with doctors and daily memos. Not only do SD cards guarantee easy transfer to a computer, they also provide a lot of storage space.

Easy file locating and high visibility

The convenient and easy-to-use calendar search feature makes it quicker than ever to locate audio files by the specific date you save them to – whether that date is today, a day in the past or in the future. Information is displayed in larger characters on the recorder's 2.14-inch display, so that everyone can read and operate the recorder with ease. The large, simple buttons make navigating through the LCD easier than ever.

Clear recordings and enhanced listening

The DP-311 recorder offers clear recording quality thanks to the large, wide-band microphone that eliminates any low-level hissing sounds. What's more, you can connect an external microphone for easily recording phone calls. Listen to recordings any time you like at a high volume of up to 200mW. This also makes the large speaker perfect for sharing information with a group, or for users with hearing impairments.
